```
111.222333444555666777888999
Boolean:
Status: True
Character:
Single Quote '
Double Quote "
Back Slash \
Now null:
Hi, I am an Object
-1198555787 System.String
34 System.Int32
False
S1 is: String 1 and s2 is String 1
S1 is: String 1 and s2 is New String 1 c:\NewFolder\Hello\P1.cs
c:\NewFolder\Hello\P1.cs
We can also write
like this
Flow Control: (if)
i is 25
i is Non - zero
Switch:
integerA = 2
Good morning!
```

PRACTICAL-2

AIM: GTU PROGRAMS:

Write console based program in code behind language VB or C# to print following pattern.

```
@@@@@
@ @ @ @
@@@
@@
using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Threading.Tasks;
namespace Practical 2
{
    class Program
        static void Main(string[] args)
        {
            for(int i=5;i>0;i--)
            {
                for(int j=0;j<i;j++)</pre>
                    Console.Write("@");
                }
                Console.WriteLine(" ");
            Console.ReadKey();
        }
    }
}
              fille:///D:/d
    المارية) المارية)
```

2) Write console based program in code behind language VB or C# to print following pattern.

```
1
1 2
123
1234
using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Threading.Tasks;
namespace Practical 2
{
    class pattern1
    {
        static void Main(string[] args)
        {
            int i, j;
            for (i = 1; i < 5; i++)
            {
                for (j = 1; j <= i; j++)
                {
                    Console.Write(j + " ");
                Console.WriteLine();
            }
            Console.ReadKey();
        }
    }
```

3) Write C# code to prompt a user to input his/her name and country name and then the output will be shown as an example below:

Hello Ram from country India.

```
using System;
using System.Collections.Generic;
using System.Ling;
using System.Text;
using System.Threading.Tasks;
namespace Practical 2
  class stringprint
    static void Main(string[] args)
      Console.WriteLine("Enter Your name");
      string name = Console.ReadLine();
      Console.WriteLine("Enter Country");
      string country = Console.ReadLine();
      Console.WriteLine("Hello" + name + "from country" + country);
      Console.ReadLine();
    }
  }
```

```
Enter Your name
Vvp
Enter Country
india
Hello Vvp from country india
```

4) Create C# console application to define Car class and derive Maruti and Mahindra from it to demonstrate inheritance.

```
using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Threading.Tasks;
namespace Practical_2
{
    class inheritance
        public static void Main()
        {
            Maruti car1 = new Maruti("Swift");
            car1.haveAGS = true;
            car1.Name = "Swift";
            Console.WriteLine("Details Car 1: {0} and {1}", car1.Name,
car1.haveAGS == true ? "Have AGS" : "not Have AGS");
            Mahindra car2 = new Mahindra();
            car2.Name = "XUV500";
            Console.WriteLine("Car 2: {0}", car2.Name);
            Console.ReadLine();
        }
    }
public class Car
     protected string name;
     public Car(string name)
           this.name = name;
     public Car()
     {
     }
     public virtual string Name
           get
           {
                return name;
```

```
}
           set
           {
                 if(value.Length>3)
                 name = value;
                 else
                 name="Unknown";
     }
}
public class Maruti : Car
     public Maruti(string name) : base(name)
     {
     public override string Name
     {
           get
                 return name;
           set
           {
                 if(value.Length>3)
                 name = value + " -Maruti";
                 else
                 name="Unknown";
           }
     public bool haveAGS;
public class Mahindra : Car
     public Mahindra(string name) : base(name)
     {
     }
public Mahindra(){}
public override string Name
{
     get
```

```
return name;
}
set
{
    if(value.Length>3)
    name = value + " -Mahindra";
    else
    name="Unknown";
}
}
```

Details Car 1: Swift -Maruti and Have AGS Car 2: XUV500 -Mahindra

PRACTICAL-3

AIM: OVERLOADING

Write a c# program to add two integers, two vectors and two metric using method overloading.

```
using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System. Threading. Tasks;
namespace practical 3
    class method over
        public void add(int a, int b)
            int sum = a + b;
            Console.WriteLine("Addition is:{0}", sum);
        public void add()
            int i, j, n;
            int[,] arr1 = new int[50, 50];
            int[,] brr1 = new int[50, 50];
            int[,] crr1 = new int[50, 50];
            Console.Write("Input the size of the square matrix: ");
            n = Convert.ToInt32(Console.ReadLine());
            Console.Write("Input elements in the first matrix
:\n");
            for (i = 0; i < n; i++)
            {
                for (j = 0; j < n; j++)
                    Console.Write("{0},{1}:", i, j);
                    arr1[i, j] =
Convert.ToInt32(Console.ReadLine());
                }
            Console.Write("Input elements in the Second matrix
:\n");
            for (i = 0; i < n; i++)
```

```
{
                for (j = 0; j < n; j++)
                    Console.Write("{0},{1}:", i, j);
                    brr1[i, j] =
Convert.ToInt32(Console.ReadLine());
            }
            Console.Write("\nThe First matrix is :\n");
            for (i = 0; i < n; i++)
            {
                Console.Write("\n");
                for (j = 0; j < n; j++)
                    Console.Write("{0}\t", arr1[i, j]);
            Console.Write("\nThe Second matrix is :\n");
            for (i = 0; i < n; i++)
            {
                Console.Write("\n");
                for (j = 0; j < n; j++)
                    Console.Write("{0}\t", brr1[i, j]);
            for (i = 0; i < n; i++)
            {
                for (j = 0; j < n; j++)
                    crr1[i, j] = arr1[i, j] + brr1[i, j];
            }
            Console.Write("\nAddition of Two Matrix:\n");
            for (i = 0; i < n; i++)
            {
                Console.Write("\n");
                for (j = 0; j < n; j++)
                {
                    Console.Write("{0}\t", crr1[i, j]);
            }
        public void add(Vector a, Vector b)
            Vector result=new Vector();
            result.x = a.x + b.x;
            result.y = a.y + b.y;
            result.z = a.z + b.z;
```

```
Console.WriteLine("Addition of Two vectors is:");

AIM: FILE HANDLING

Write a C# program to copy data from one file to another using StreamReader and StreamWriter class.

```
using System;
using System.Collections.Generic;
using System.Linq;
using System.Text;
using System.Threading.Tasks;
using System.IO;
namespace practical_5
{
    class copyfile
    {
        static void Main(string[] args)
        {
            CopyFile cp = new CopyFile();
            String file1 = @"D:\study\file1.txt";
            String file2 = @"D:\study\file2.txt";
            cp.copyFile(file1, file2);
            Console.ReadKey();
        }
    }
    public class CopyFile
    {
        public void copyFile(String file1, String file2)
        {
            using (StreamReader reader = new
StreamReader(file1))
            {
                using (StreamWriter writer = new
```

```
StreamWriter(file2))
             String line = null;
                        while ((line = reader.ReadLine()) != null)
                        {
                             writer.WriteLine(line);
                        }
                    }
               }
           }
      }
  }
                               file2 - Notepad
file1 - Notepad

WebService1

The following operations are supported. For a formal definition, please review the Service Description.

- add
- div
- mul
- sub

This web service is using http://tempuri.org/ as its default namespace.

Recommendation: Change the default namespace before the XML Web service is mad

Each XML Web service needs a unique namespace in order for client applications to distinguish it from ot Web services should use a more permanent namespace.

Your XML Web service should be identified by a namespace that you control. For example, you can use y they need not point to actual resources on the Web. (XML Web service namespaces are URIs.)
